Chapter 3

Intensity Transformations and Spatial Filtering

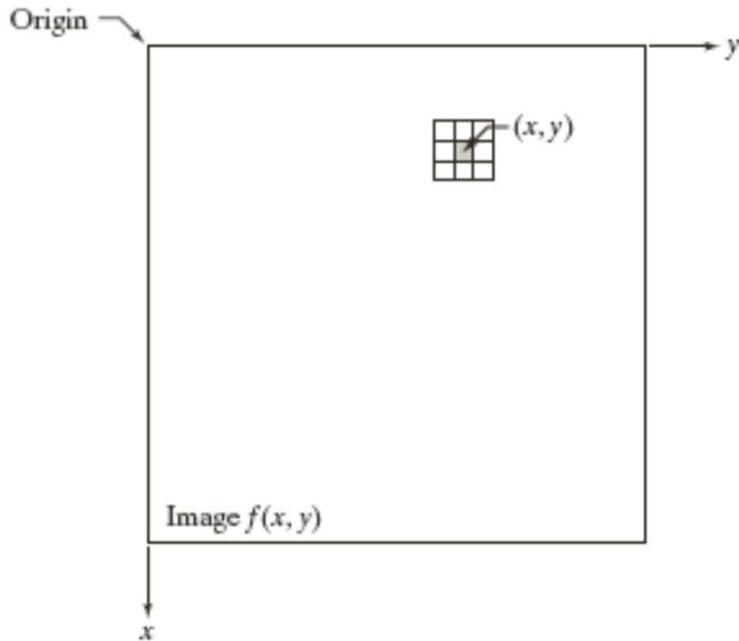

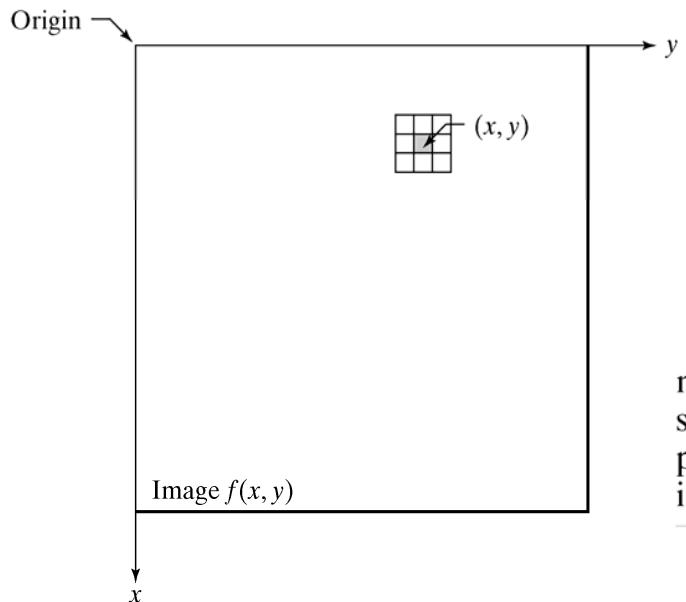

FIGURE 2.1
A neighborhood
of size 3×3
centered at point
 (x, y) in an image.

توابع تبدیل شدت رنگ

همسايگى حول يك نقطه

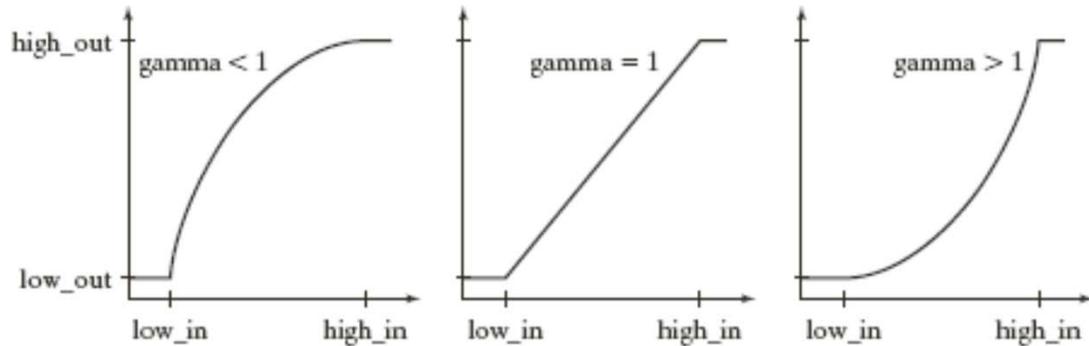

neighborhood of size 3×3 about a point (x, y) in an image.

Chapter 3

Intensity Transformations and Spatial Filtering

a b c

FIGURE 2.2
The various
mappings
available in
function
`imadjust`.

توابع تبدیل شدت رنگ

تابع تنظیم تصویر

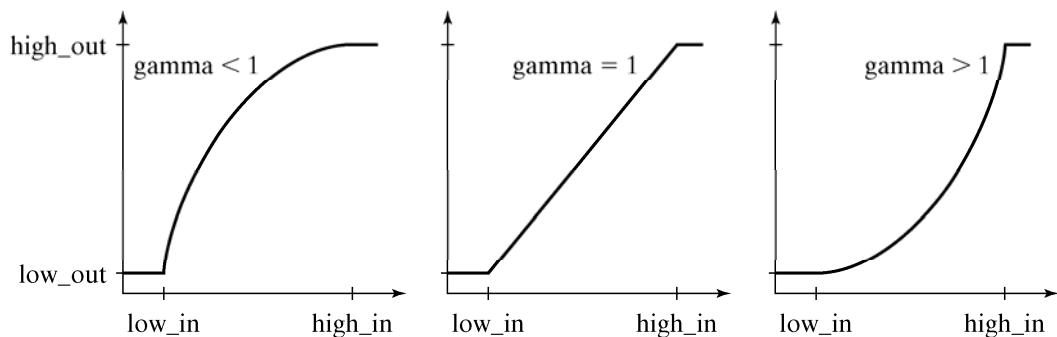

```
g = imadjust(f,[low_in high_in], [low_out high_out], gamma)
```

```
g1 = imadjust(f, [0 1], [1 0])
```

توابع تبدیل شدت رنگ

تابع تنظیم تصویر: انواع نگاشتهای ممکن با `imadjust`

`g = imadjust(f,[low_in high_in], [low_out high_out], gamma)`

various mappings available in function `imadjust`.

Chapter 3

Intensity Transformations and Spatial Filtering

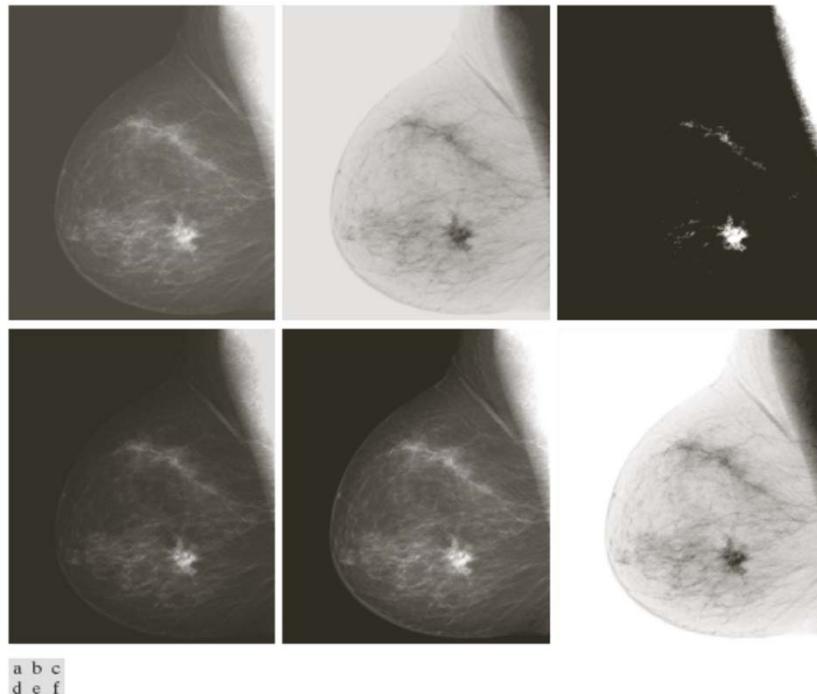

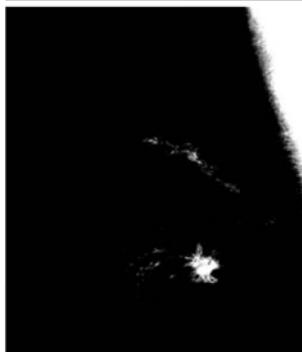

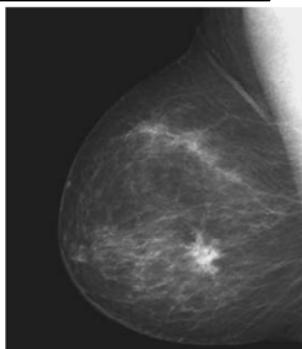

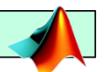

FIGURE 2.3 (a) Original digital mammogram. (b) Negative image. (c) Result of expanding the intensities in the range $[0.5, 0.75]$. (d) Result of enhancing the image with $\text{gamma} = 2$. (e) and (f) Results of using function `stretchlim` as an automatic input into function `imadjust`. (Original image courtesy of G. E. Medical Systems.)

توابع تبدیل شدت رنگ

تابع تنظیم تصویر: مثال

 f  $g1 = \text{imadjust}(f, [0 1], [1 0])$ $g = \text{imcomplement}(f)$ a
c
b
d $g2 = \text{imadjust}(f, [0.5 0.75], [0 1])$ $g2 = \text{imadjust}(f, [], [], 2)$

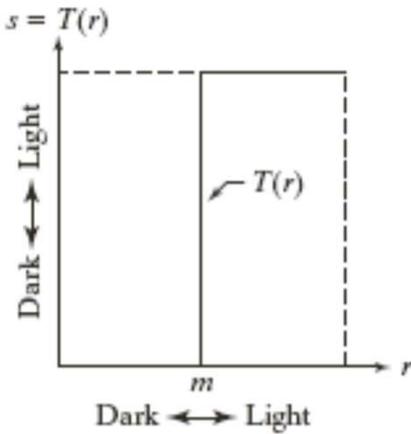

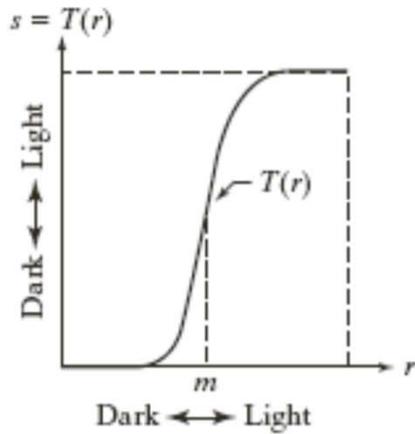

(b) Negative image.
 (c) Result of expanding the intensity range [0.5, 0.75].
 (d) Result of enhancing the image with gamma = 2.

MATLAB

Chapter 3

Intensity Transformations and Spatial Filtering

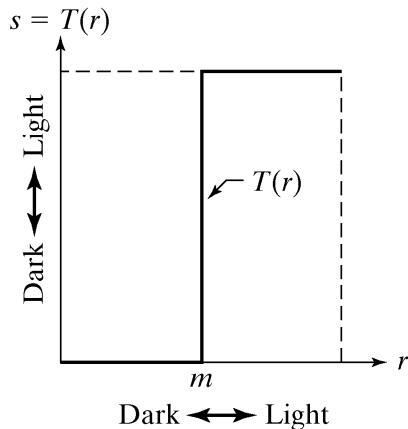

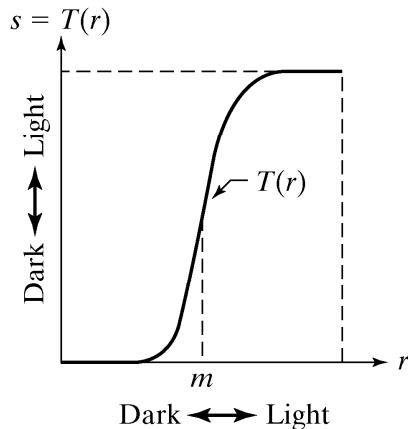

a b

FIGURE 2.4
(a) Contrast-stretching transformation.
(b) Thresholding transformation.

توابع تبدیل شدت رنگ

تبدیل‌های کشش کنتراست و آستانه‌گیری

a b

- (a) Contrast-stretching transformation.
- (b) Thresholding transformation.

$$s = T(r) = \frac{1}{1 + (m/r)^E}$$

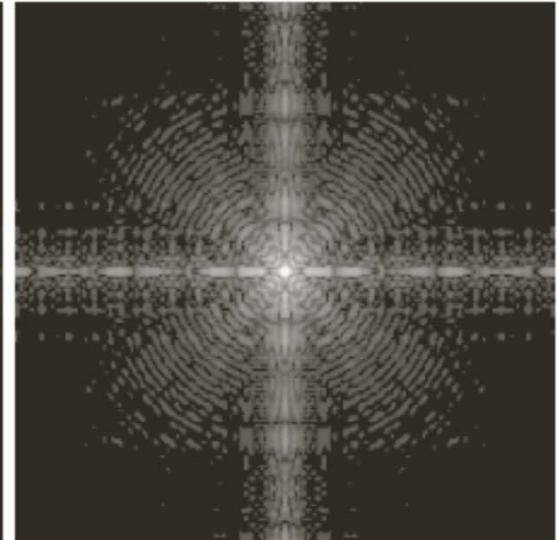

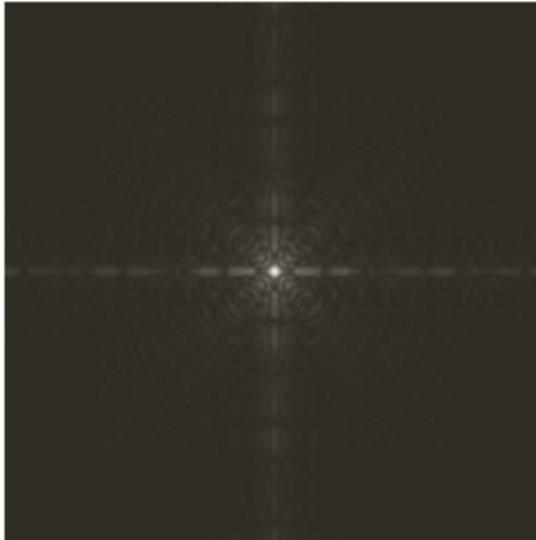

Chapter 3

Intensity Transformations and Spatial Filtering

a b

FIGURE 2.5

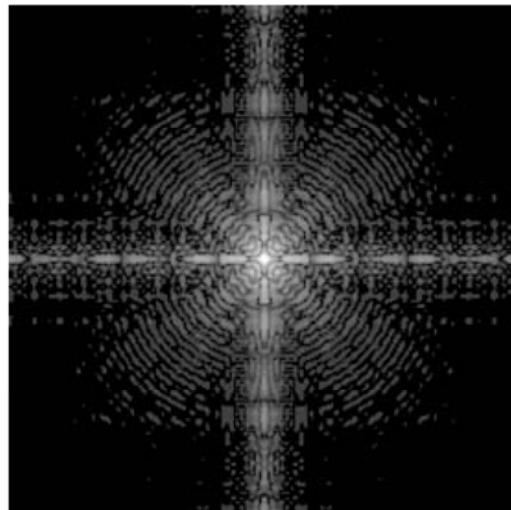

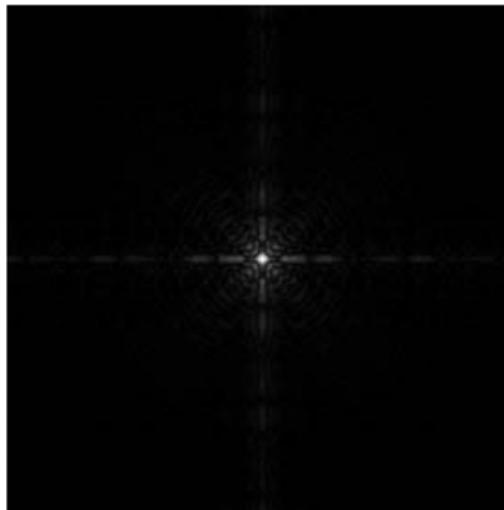

- (a) A Fourier spectrum.
(b) Result of using a log transformation.

توابع تبدیل شدت رنگ

تبدیل لگاریتمی: استفاده از تبدیل لگاریتمی برای کاهش بازه‌ی پویای تصویر

$$g = c * \log(1 + f)$$

a b

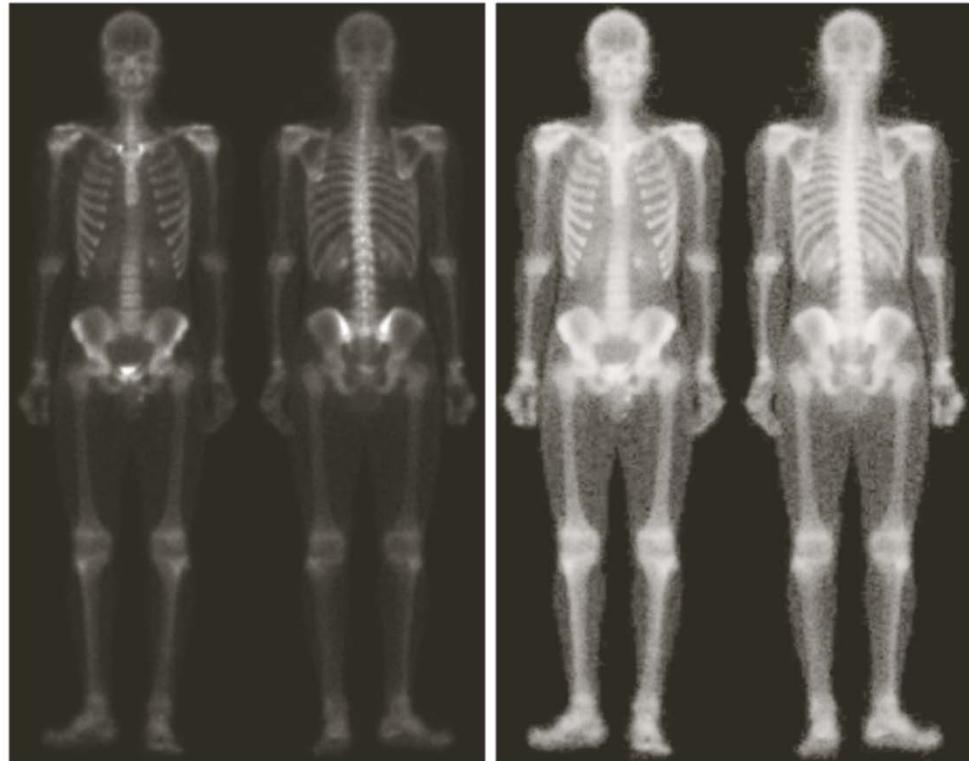

(a) A Fourier spectrum.
 (b) Result obtained by performing a log transformation.

```
g = im2uint8(mat2gray(log(1 + double(f))))
```

Chapter 3

Intensity Transformations and Spatial Filtering

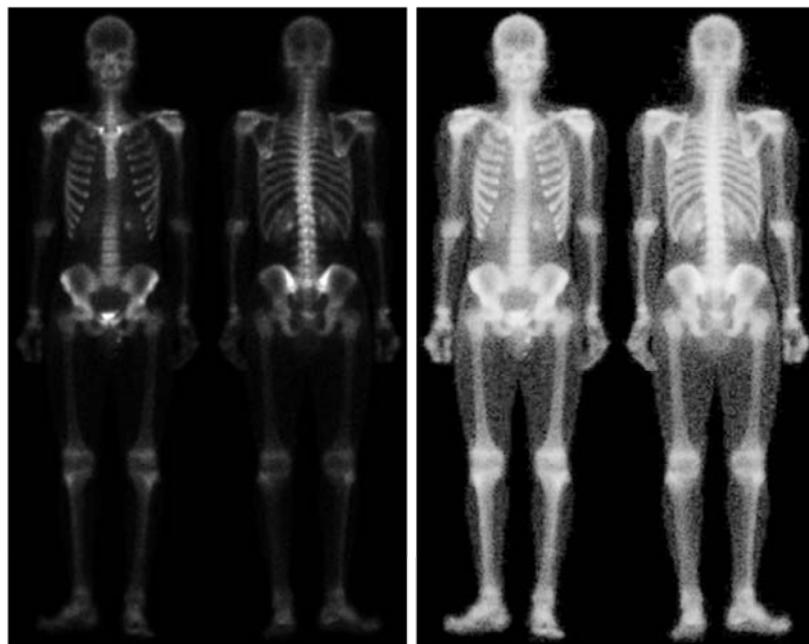

a b

Chapter 3

Intensity Transformations and Spatial Filtering

Color Specifiers		Line Specifiers		Marker Specifiers	
Symbol	Color	Symbol	Line Style	Symbol	Marker
k	Black	-	Solid	+	Plus sign
w	White	--	Dashed	o	Circle
r	Red	:	Dotted	*	Asterisk
g	Green	-.	Dash-dot	.	Point
b	Blue			x	Cross
c	Cyan			s	Square
y	Yellow			d	Diamond
m	Magenta			^	Upward-pointing triangle
				v	Downward-pointing triangle
				>	Right-pointing triangle
				<	Left-pointing triangle
				p	Pentagram (five-point star)
				h	Hexagram (six-point star)

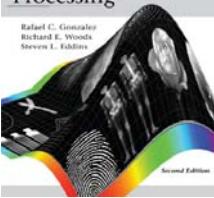

TABLE 2.1
Color, line, and marker specifiers for use in functions `stem` and `plot`.

هیستوگرام تصویر

خصیصه‌های LineSpec

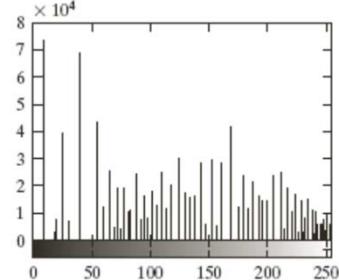

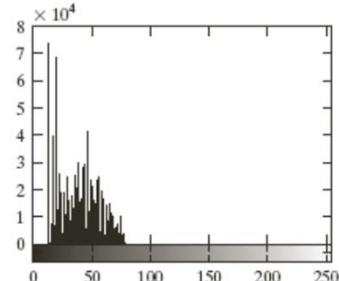

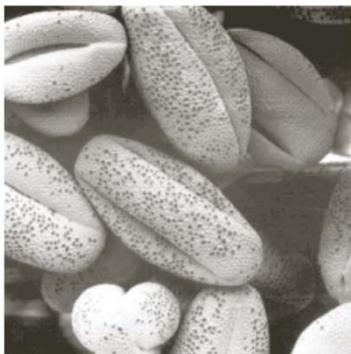

Symbol	Color	Symbol	Line Style	Symbol	Marker
k	Black	-	Solid	+	Plus sign
w	White	--	Dashed	o	Circle
r	Red	:	Dotted	*	Asterisk
g	Green	-.	Dash-dot	.	Point
b	Blue	none	No line	x	Cross
c	Cyan			s	Square
y	Yellow			d	Diamond
m	Magenta			none	No marker

Attributes for functions `stem` and `plot`. The `none` attribute is applicable only to function `plot`, and must be specified individually. See the syntax for function `plot` below.

$$g = adapthisteq(f, \dots)$$
$$g = adapthisteq(f)$$

Chapter 3

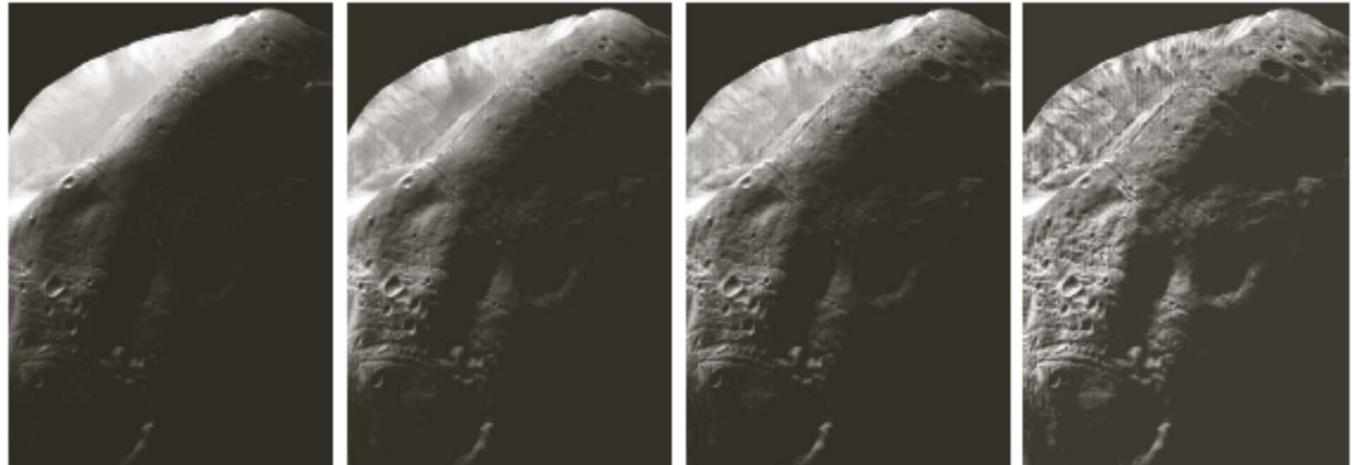

Intensity Transformations and Spatial Filtering

TABLE 2.2 Parameters and corresponding values for use in function `adapthisteq`.

Parameter	Value
'NumTiles'	Two-element vector of positive integers specifying the number of tiles by row and column, [r c]. Both r and c must be at least 2. The total number of tiles is equal to r*c. The default is [8 8].
'ClipLimit'	Scalar in the range [0 1] that specifies a contrast enhancement limit. Higher numbers result in more contrast. The default is 0.01.
'NBins'	Positive integer scalar specifying the number of bins for the histogram used in building a contrast enhancing transformation. Higher values result in greater dynamic range at the cost of slower processing speed. The default is 256.
'Range'	A string specifying the range of the output image data: ' <code>original</code> ' — Range is limited to the range of the original image, $[\min(f(:)) \max(f(:))]$. ' <code>full</code> ' — Full range of the output image class is used. For example, for <code>uint8</code> data, range is [0 255]. This is the default.
'Distribution'	A string specifying the desired histogram shape for the image tiles: ' <code>uniform</code> ' — Flat histogram (this is the default). ' <code>rayleigh</code> ' — Bell-shaped histogram. ' <code>exponential</code> ' — Curved histogram. (See Section 4.2.2 for the equations for these distributions.)
'Alpha'	Nonnegative scalar applicable to the Rayleigh and exponential distributions. The default value is 0.4.

Chapter 3

Intensity Transformations and Spatial Filtering

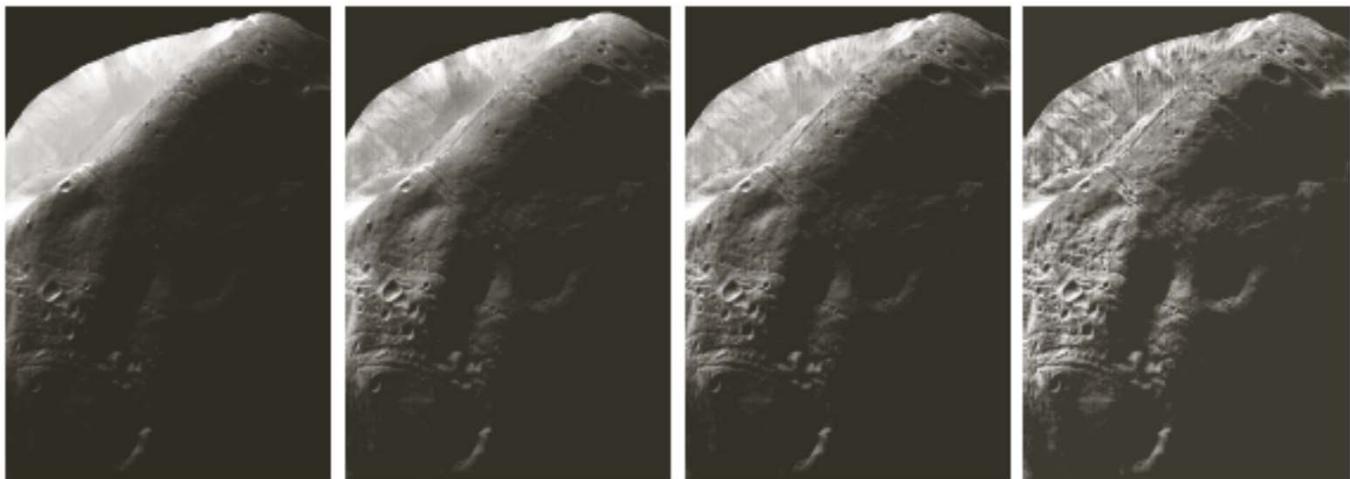

a b c d

FIGURE 2.12 (a) Same as Fig. 2.10(a). (b) Result of using function `adapthisteq` with the default values. (c) Result of using this function with parameter `NumTiles` set to [25 25]. Result of using this number of tiles and `ClipLimit` = 0.05.
